

# Comm-Works Total Security

**security** \si-'kyur-ə-tē\  
*n* 1: the quality or state of being secure: as freedom from danger : safety, freedom from fear or anxietyating or exchanging (especially information)

## Comm-Works' Total Security

With today's technological advancements, thefts from enterprises are becoming more sophisticated. The best way to protect your enterprise from such activities is to leverage the most sophisticated video and analytics tools. Comm-Works understands how critical this component is to your enterprise. For that reason, we developed a suite of design, implementation and support services that allows you to cost-effectively manage and analyze video information across your enterprise.

### IP Video & Analytics

Enterprise security teams constantly face the challenge of not only managing incoming data effectively to ensure customers' and employees' safety, but also to limit loss from theft or damage at hundreds to thousands of locations. With IP video and analytics, real-time information regarding security threats, store traffic and customer behavior is accessible by multiple users at multiple locations and can be designed to alert you to specific activities or movements.

Comm-Works reduces the burden on your internal resources and eliminates the challenges of utilizing multiple vendors to deploy and support your IP surveillance solution. We provide a single point of contact to assess your existing network, design your IP surveillance solution, run cable, install equipment and provide ongoing support for your IP surveillance and analytics solution at all of your locations worldwide.

The integrity of the entire security network can be called into question if equipment fails. With Comm-Works' global service partner network, local, knowledgeable technicians are available to quickly isolate and resolve any of these issues. Comm-Works provides various on-site support options as well as equipment monitoring to ensure that your IP video and analytics equipment is always operational.

*Control costs and eliminate the challenge of managing multiple networks by using an IP surveillance solution that resides on your existing network.*

Comm-Works has relationships with key manufacturers, software developers and analytics providers, including: Axis Communications, Bosch, Genetech, HP, OnSSI, Panasonic and Sony to provide a complete IP surveillance and analytics solution.

## Access Control

Many facility managers within multi-site enterprises find it challenging to manage keys and locks for their locations. With an access control solution, the expensive and cumbersome challenge of managing access to a site is resolved. Access control systems allow you to provide access to certain parts of your site, but restrict access to others, such as a manager's office. Additionally, an access control system provides you with specific data, which allows you better oversight and provides a safer and more secure environment.

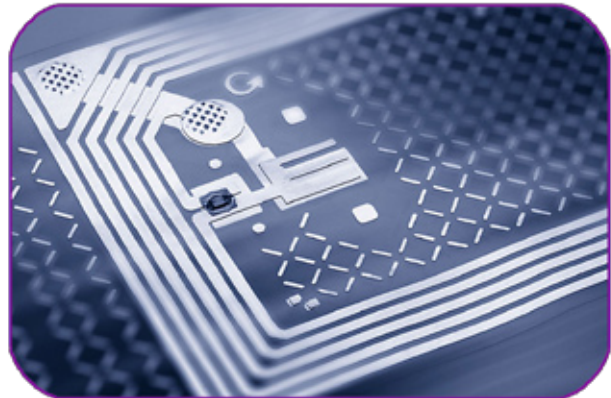

Comm-Works further reduces the burden of managing your access control system through our suite of lifecycle services, which includes the implementation and support of your system.

*Comm-Works provides various on-site support options as well as equipment monitoring to ensure that your access control equipment is functioning as expected.*

## Electronic Article Surveillance

Theft is on the rise and loss prevention teams are tasked with reducing shrink without restricting the sale of merchandise or increasing costs. Electronic Article Surveillance (EAS) systems are designed to help retailers make merchandise readily accessible, yet protect their profits by reducing shoplifting and internal theft.

An EAS system, coupled with other security measures, provides retailers with a strong deterrent against theft. Through our complete suite of Lifecycle Services, Comm-Works can implement and support an EAS system that meets your needs.

*Experts say theft can be reduced by 60 percent or more when a reliable EAS system is used.*
